BACKGROUND: Invasive plant management is the most time-consuming task faced by District crews. Invasive plants are a significant challenge to habitat conservation. Management of invasive plants is necessary to improve and conserve habitat quality and species diversity on District properties throughout Lake County. The District conducts removal of invasive woody species as part of a Land

Management Program to restore and enhance woodlands, savannas, prairies and wetlands to increase the health, diversity, and sustainability of flora and wildlife populations and to restore or enhance ecosystem services.

The District advertised for bids for multiple clearing projects, each indicated as a separate preserve (Project) located within Lake County, under one consolidated bidding process. Each Project has its own Scope of Work and Specifications. Work includes all labor, equipment and materials to selectively remove invasive woody trees and shrubs and thin select native species, and includes disposal services and follow-up selective herbicide applications.

The project was advertised on July 23, 2018. Work is anticipated to begin December 15, 2018 and be completed by August 1, 2019.

Staff recommends the following lowest responsible bidders be awarded contracts for the following Projects:
